Opportunities — These suggestions can help your page load faster. They don't [directly affect](#) the Performance score.

Opportunity

Estimated Savings

▲

Reduce unused JavaScript

1.35 s

^

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity.

Learn more.

LCP

Show 3rd-party resources (0)

URL	Transfer Size	Potential Savings
chrome-extension://niloccemoadcdkdjlinkgdfekahmflj/chunks/globalStyles-22fbf6ab.js	146.8 KiB	118.8 KiB
chrome-extension://niloccemoadcdkdjlinkgdfekahmflj/pages/injector/content.js	115.6 KiB	83.9 KiB

Eliminate render-blocking resources

0.79 s

^

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles.

Learn more.

FCP

LCP

Show 3rd-party resources (1)

URL	Transfer Size	Potential Savings
...3.6.0/jquery.min.js (cdnjs.cloudflare.com)	27.6 KiB	1,070 ms

Defer offscreen images

0.15 s

^

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive.

Learn more.

Passed audits (30)

Properly size images

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn more](#).

Minify CSS

Minifying CSS files can reduce network payload sizes. [Learn more](#).

FCP

LCP

Reduce unused CSS — Potential savings of 12 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn more](#).

FCP

LCP

☐ Show 3rd-party resources (0)

URL	Transfer Size	Potential Savings
/*! * Font Awesome Free 5.15.4 by @fontawesome - https://fontawesome.com * License - https://fonta...	12.0 KiB	12.0 KiB

Efficiently encode images

Optimized images load faster and consume less cellular data. [Learn more](#).

Serve images in next-gen formats

Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. [Learn more](#).

Enable text compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn more](#).

FCP

LCP

Preconnect to required origins

Consider adding `preconnect` or `dns-prefetch` resource hints to establish early connections to important third-party origins. [Learn more](#).

FCP

LCP

Initial server response time was short — Root document took 10 ms

Keep the server response time for the main document short because all other requests depend on it. [Learn more](#).

FCP

LCP

☐ Show 3rd-party resources (0)

URL	Time Spent
-----	------------

URL

/magic-square-game/ (eoinlarkin.github.io)

Time Spent

10 ms

Avoid multiple page redirects

Redirects introduce additional delays before the page can be loaded. [Learn more](#).

FCP

LCP

Preload key requests

Consider using `<link rel=preload>` to prioritize fetching resources that are currently requested later in page load. [Learn more](#).

FCP

LCP

Use HTTP/2

HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. [Learn more](#).

Use video formats for animated content

Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. [Learn more](#)

LCP

Remove duplicate modules in JavaScript bundles

Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity.

TBT

Avoid serving legacy JavaScript to modern browsers — Potential savings of 0 KiB

Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. [Learn More](#)

TBT

Google Analytics	0 KiB	0 ms

Lazy load third-party resources with facades

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. [Learn more](#).

TBT

Largest Contentful Paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more.	
Uses passive listeners to improve scrolling performance	^
Consider marking your touch and wheel event listeners as `passive` to improve your page's scroll performance. Learn more.	
Avoids <code>document.write()</code>	^
For users on slow connections, external scripts dynamically injected via `document.write()` can delay page load by tens of seconds. Learn more.	
<input type="radio"/> Avoid non-composited animations	^
Animations which are not composited can be janky and increase CLS. Learn more CLS	
Image elements have explicit <code>width</code> and <code>height</code>	^
Set an explicit width and height on image elements to reduce layout shifts and improve CLS. Learn more CLS	
Has a <code><meta name="viewport"></code> tag with <code>width</code> or <code>initial-scale</code>	^
A ` <code><meta name="viewport"></code> ` not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input . Learn more. TBT	

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. [Learn more](#) in our guide on [conducting an accessibility review](#).

<input type="radio"/> The page has a logical tab order	^
Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more.	
<input type="radio"/> Interactive controls are keyboard focusable	^
Custom interactive controls are keyboard focusable and display a focus indicator. Learn more.	
<input type="radio"/> Interactive elements indicate their purpose and state	^
Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn more.	
<input type="radio"/> The user's focus is directed to new content added to the page	^
If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn more.	
<input type="radio"/> User focus is not accidentally trapped in a region	^
A user can tab into and out of any control or region without accidentally trapping their focus. Learn more.	
<input type="radio"/> Custom controls have associated labels	^
Custom interactive controls have associated labels, provided by <code>aria-label</code> or <code>aria-labelledby</code> . Learn more.	
<input type="radio"/> Custom controls have ARIA roles	^
Custom interactive controls have appropriate ARIA roles. Learn more.	
<input type="radio"/> Visual order on the page follows DOM order	^
DOM order matches the visual order, improving navigation for assistive technology. Learn more.	
<input type="radio"/> Offscreen content is hidden from assistive technology	^
Offscreen content is hidden with <code>display: none</code> or <code>aria-hidden=true</code> . Learn more.	
<input type="radio"/> HTML5 landmark elements are used to improve navigation	^
Landmark elements (<code><main></code> , <code><nav></code> , etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more.	

Passed audits (12) ^

<code>[aria-hidden="true"]</code> is not present on the document <code><body></code>	^
Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document ` <code><body></code> `. Learn more.	

<code>[aria-hidden="true"]</code> elements do not contain focusable descendents	^
Focusable descendents within an <code>`[aria-hidden="true"]`</code> element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn more.	
Buttons have an accessible name	^
When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. Learn more.	
The page contains a heading, skip link, or landmark region	^
Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. Learn more.	
Background and foreground colors have a sufficient contrast ratio	^
Low-contrast text is difficult or impossible for many users to read. Learn more.	
Document has a <code><title></code> element	^
The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more.	
<code>[id]</code> attributes on active, focusable elements are unique	^
All focusable elements must have a unique <code>`id`</code> to ensure that they're visible to assistive technologies. Learn more.	
Heading elements appear in a sequentially-descending order	^
Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. Learn more.	
<code><html></code> element has a <code>[lang]</code> attribute	^
If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more.	
<code><html></code> element has a valid value for its <code>[lang]</code> attribute	^
Specifying a valid BCP 47 language helps screen readers announce text properly. Learn more.	
Links have a discernible name	^
Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn more.	
<code>[user-scalable="no"]</code> is not used in the <code><meta name="viewport"></code> element and the <code>[maximum-scale]</code> attribute is not less than 5.	^
Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more.	
Not applicable (32)	^
<input type="radio"/> <code>[accesskey]</code> values are unique	^
Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more.	
<input type="radio"/> <code>[aria-*)</code> attributes match their roles	^
Each ARIA <code>`role`</code> supports a specific subset of <code>`aria-*`</code> attributes. Mismatching these invalidates the <code>`aria-*`</code> attributes. Learn more.	
<input type="radio"/> <code>button</code> , <code>link</code> , and <code>menuitem</code> elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> ARIA input fields have accessible names	^
When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> ARIA <code>meter</code> elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> ARIA <code>progressbar</code> elements have accessible names	^
When a <code>`progressbar`</code> element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> <code>[role]</code> s have all required <code>[aria-*)</code> attributes	^
Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more.	
<input type="radio"/> Elements with an ARIA <code>[role]</code> that require children to contain a specific <code>[role]</code> have all required children.	^

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more.	
<input type="radio"/> <code>[role]</code> s are contained by their required parent element	^
Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more.	
<input type="radio"/> <code>[role]</code> values are valid	^
ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more.	
<input type="radio"/> ARIA toggle fields have accessible names	^
When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> ARIA <code>tooltip</code> elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> ARIA <code>treeitem</code> elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	
<input type="radio"/> <code>[aria-*)</code> attributes have valid values	^
Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more.	
<input type="radio"/> <code>[aria-*)</code> attributes are valid and not misspelled	^
Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more.	
<input type="radio"/> <code><dl></code> 's contain only properly-ordered <code><dt></code> and <code><dd></code> groups, <code><script></code> , <code><template></code> or <code><div></code> elements.	^
When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. Learn more.	
<input type="radio"/> Definition list items are wrapped in <code><dl></code> elements	^
Definition list items (<code><dt></code> and <code><dd></code>) must be wrapped in a parent <code><dl></code> element to ensure that screen readers can properly announce them. Learn more.	
<input type="radio"/> ARIA IDs are unique	^
The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. Learn more.	
<input type="radio"/> No form fields have multiple labels	^
Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. Learn more.	
<input type="radio"/> <code><frame></code> or <code><iframe></code> elements have a title	^
Screen reader users rely on frame titles to describe the contents of frames. Learn more.	
<input type="radio"/> Image elements have <code>[alt]</code> attributes	^
Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. Learn more.	
<input type="radio"/> <code><input type="image"></code> elements have <code>[alt]</code> text	^
When an image is being used as an <code><input></code> button, providing alternative text can help screen reader users understand the purpose of the button. Learn more.	
<input type="radio"/> Form elements have associated labels	^
Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more.	
<input type="radio"/> Lists contain only <code></code> elements and script supporting elements (<code><script></code> and <code><template></code>).	^
Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. Learn more.	
<input type="radio"/> List items (<code></code>) are contained within <code></code> or <code></code> parent elements	^
Screen readers require list items (<code></code>) to be contained within a parent <code></code> or <code></code> to be announced properly. Learn more.	
<input type="radio"/> The document does not use <code><meta http-equiv="refresh"></code>	^
Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. Learn more.	
<input type="radio"/> <code><object></code> elements have <code>[alt]</code> text	^
Screen readers cannot translate non-text content. Adding alt text to <code><object></code> elements helps screen readers convey meaning to users. Learn more.	
<input type="radio"/> No element has a <code>[tabindex]</code> value greater than 0	^

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. [Learn more](#).

- Cells in a `<table>` element that use the `[headers]` attribute refer to table cells within the same table.

Screen readers have features to make navigating tables easier. Ensuring `<td>` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. [Learn more](#).

- `<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. [Learn more](#).

- `[lang]` attributes have a valid value

Specifying a valid [BCP 47 language](#) on elements helps ensure that text is pronounced correctly by a screen reader. [Learn more](#).

- `<video>` elements contain a `<track>` element with `[kind="captions"]`

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. [Learn more](#).

Best Practices

Trust and Safety

- Ensure CSP is effective against XSS attacks

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. [Learn more](#)

Description	Directive	Severity
No CSP found in enforcement mode		High

General

- Detected JavaScript libraries

All front-end JavaScript libraries detected on the page. [Learn more](#).

Name	Version
jQuery	3.6.0

- Browser errors were logged to the console

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. [Learn more](#)

☒ Show 3rd-party resources (1)

Source	Description
www.google-analytics.com/analytics.js:1	Failed to load resource: net::ERR_CONNECTION_REFUSED

Passed audits (15)

- Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](#), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more](#).

- Links to cross-origin destinations are safe

Add `rel="noopener"` or `rel="noreferrer"` to any external links to improve performance and prevent security vulnerabilities. [Learn more](#).

- Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. [Learn more](#).

- Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. [Learn more](#).

Avoids front-end JavaScript libraries with known security vulnerabilities	^
Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. Learn more .	
Allows users to paste into password fields	^
Preventing password pasting undermines good security policy. Learn more .	
Displays images with correct aspect ratio	^
Image display dimensions should match natural aspect ratio. Learn more .	
Serves images with appropriate resolution	^
Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. Learn more .	
Page has the HTML doctype	^
Specifying a doctype prevents the browser from switching to quirks-mode. Learn more .	
Properly defines charset	^
A character encoding declaration is required. It can be done with a <code><meta></code> tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. Learn more .	
Avoids <code>unload</code> event listeners	^
The <code>unload</code> event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache. Consider using the <code>pagehide</code> or <code>visibilitychange</code> events instead. Learn more	
Avoids Application Cache	^
Application Cache is deprecated. Learn more .	
Avoids deprecated APIs	^
Deprecated APIs will eventually be removed from the browser. Learn more .	
Page has valid source maps	^
Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. Learn more .	
No issues in the <code>Issues</code> panel in Chrome Devtools	^
Issues logged to the <code>Issues</code> panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.	
Not applicable (1)	
<input type="radio"/> Fonts with <code>font-display: optional</code> are preloaded	^
Preload <code>optional</code> fonts so first-time visitors may use them. Learn more	

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more](#).

Additional items to manually check (1) — Run these additional validators on your site to check additional SEO best practices.	^
<input type="radio"/> Structured data is valid	^
Run the Structured Data Testing Tool and the Structured Data Linter to validate structured data. Learn more .	
Passed audits (11)	
Has a <code><meta name="viewport"></code> tag with <code>width</code> or <code>initial-scale</code>	^
A <code><meta name="viewport"></code> not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input . Learn more . TBT	

Document has a <title> element	^
The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more .	
Document has a meta description	^
Meta descriptions may be included in search results to concisely summarize page content. Learn more .	
Page has successful HTTP status code	^
Pages with unsuccessful HTTP status codes may not be indexed properly. Learn more .	
Links have descriptive text	^
Descriptive link text helps search engines understand your content. Learn more .	
Links are crawlable	^
Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. Learn More	
Page isn't blocked from indexing	^
Search engines are unable to include your pages in search results if they don't have permission to crawl them. Learn more .	
Document has a valid hreflang	^
hreflang links tell search engines what version of a page they should list in search results for a given language or region. Learn more .	
Document uses legible font sizes — 100% legible text	^
Font sizes less than 12px are too small to be legible and require mobile visitors to “pinch to zoom” in order to read. Strive to have >60% of page text ≥12px. Learn more .	
<div><input type="checkbox"/> Show 3rd-party resources (0)</div>	
Source	Selector
Legible text	% of Page Text
	Font Size
	100.00%
	≥ 12px
Document avoids plugins	^
Search engines can't index plugin content, and many devices restrict plugins or don't support them. Learn more .	
Tap targets are sized appropriately — 100% appropriately sized tap targets	^
Interactive elements like buttons and links should be large enough (48x48px), and have enough space around them, to be easy enough to tap without overlapping onto other elements. Learn more .	
Not applicable (3)	
<input type="radio"/> robots.txt is valid	^
If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. Learn more .	
<input type="radio"/> Image elements have [alt] attributes	^
Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. Learn more .	
<input type="radio"/> Document has a valid rel=canonical	^
Canonical links suggest which URL to show in search results. Learn more .	

Progressive Web App

These checks validate the aspects of a Progressive Web App. [Learn more](#).

Installable	
▲ Web app manifest or service worker do not meet the installability requirements — 1 reason	^
Service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. With proper service worker and manifest implementations, browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. Learn more .	
Failure reason	
No manifest was fetched	

PWA Optimized		
▲	Does not register a service worker that controls page and <code>start_url</code>	^
The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. Learn more .		
	Redirects HTTP traffic to HTTPS	^
If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. Learn more .		
▲	Is not configured for a custom splash screen Failures: No manifest was fetched.	^
A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. Learn more .		
▲	Does not set a theme color for the address bar. Failures: No manifest was fetched, No <code><meta name="theme-color"></code> tag found.	^
The browser address bar can be themed to match your site. Learn more .		
	Content is sized correctly for the viewport	^
If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. Learn more .		
	Has a <code><meta name="viewport"></code> tag with <code>width</code> or <code>initial-scale</code>	^
A <code><meta name="viewport"></code> not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input . Learn more . TBT		
▲	Does not provide a valid <code>apple-touch-icon</code>	^
For ideal appearance on iOS when users add a progressive web app to the home screen, define an <code>apple-touch-icon</code> . It must point to a non-transparent 192px (or 180px) square PNG. Learn More .		
▲	Manifest doesn't have a maskable icon No manifest was fetched	^
A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. Learn more .		
Additional items to manually check (3) — These checks are required by the baseline PWA Checklist but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.		
○	Site works cross-browser	^
To reach the most number of users, sites should work across every major browser. Learn more .		
○	Page transitions don't feel like they block on the network	^
Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. Learn more .		
○	Each page has a URL	^
Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. Learn more .
